Direction (Q. Nos. 1 to 10) : Read the following two passages and answer the questions that follow each passage. Your answer to these questions should be based on the passages only.

Passage – I

Trees are useful to man in three very important ways : they provide him with wood and other products, they give him shade, and they help to prevent drought and floods.

Unfortunately, in many parts of the world, man has not realized that the third of these services is the most important. In his eagerness to draw quick profit from the trees, he has cut them down in large numbers, only to find that with them he has lost the best friends he had.

Two thousand years ago a rich and powerful country cut down its trees to build warships, with which to gain itself an empire. It gained the empire, but without its trees, its soil became hard and poor. When the empire fell to pieces, the home country found itself faced by floods and starvation.

Even where a government realizes the importance of a plentiful supply of trees, it is difficult for it to persuade the villager to

see this. The villager wants wood to cook his food with, and he can earn money by making charcoal or selling wood to the townsman. He is usually too lazy or too careless to plant and look after new trees. So, unless the government has a good system of control, or can educate the people, the forests will slowly disappear.

This does not only mean that the villagers' sons and grandsons have fewer trees. The results are even more serious : for where there are trees their roots break the soil up — allowing the rain to sink in — and also bind the soil, thus preventing its being washed away easily, but where there are no trees, the rain falls on hard ground and flows away on the surface, causing floods and carrying away, with it the rich top-soil, in which crops grow so well. When all the top-soil is gone, nothing remains but worthless desert.

1. What is the most important role of trees in man's bio-system ?
 - (A) Trees provide us with fuel
 - (B) Trees give us fruits
 - (C) Trees provide shade
 - (D) Trees prevent drought and floods

2. What happens if trees are cut down in large numbers ?
- (A) We have more land for building houses and roads
 - (B) Soil turns hard and poor
 - (C) We get a good supply of wood
 - (D) We can build warships
3. Trees are highly useful because :
- (A) They prevent soil from being washed away
 - (B) They break the soil up
 - (C) They let the rain water sink in

Passage – II

To be a good teacher, you need some of the gifts of the good actor ; you must be able to hold the attention and interest of your audience ; you must be a clear speaker, with a good, strong, pleasing voice which is fully under your control ; and you must be able to act what you are teaching, in order to make its meaning clear.

Watch a good teacher, and you will see that he does not sit motionless before his class : he stands the whole time he is teaching ; he walks about, using his arms, hands and fingers to help him in his explanations, and his face to express feelings. Listen to him, and you will hear the loudness, the quality and the musical note of his voice always changing according to what he is talking about.

The fact that a good teacher has some of the gifts of a good actor does not mean that he will indeed be able to act well on the stage ; for there are very important differences between the teacher's work and the actor's. The actor has to speak words which he has learnt by heart ; he has

to repeat exactly the same words each time he plays a certain part ; even his movements and the ways in which he uses his voice are usually fixed before. What he has to do is to make all these carefully learnt words and actions seem natural on the stage.

The good teacher works in quite a different way. His audience takes an active part in his play : they ask and answer questions, they obey orders, and if they do not understand something, they say so. The teacher, therefore, has to suit his act to the needs of his audience, which is his class. He cannot learn his part by heart, but must invent it as he goes along.

I have known many teachers who were fine actors in class but were unable to take part in a stage-play because their brains would not keep discipline : they could not keep strictly to what another had written.

6. Common to a good teacher and a good actor is the quality of :
- (A) Being talkative
 - (B) Original thinking
 - (C) Capturing the attention of audience
 - (D) Making audience laugh

Direction (Q. Nos. 91 to 100) : Read the following two passages and answer the questions that follow each passage. Your answer to these questions should be based on the passages only.

Passage – I

Suppose I say to you in English that "I spent yesterday evening with a neighbour". You may well wonder whether my companion was male or female, but I have the right to tell you politely that it's none of your business. But if we were speaking French or German, I wouldn't have the privilege to equivocate in this way, because the grammar of these languages compels me to inform you about the sex of my companion whether or not I feel it is remotely your concern. This does not mean, of course, that English speakers are unable to understand the differences between evenings spent with male or female neighbours, but it does mean that they do not have to consider the sexes of neighbours, friends, teachers and a host of other persons each time they come up in a conversation, whereas speakers of some languages are obliged to do so.

On the other hand, English does oblige you to specify certain types of information that can be left to the context in other languages. If I want to tell you in English about a dinner with my neighbour, I may not have to mention the neighbour's sex, but I do have to tell you something about the timing of the event. I have to decide whether we dined, have been

dining, are dining, will be dining and so on. Chinese, on the other hand, does not oblige its speakers to specify the exact time of the action in this way, because the same verb form can be used for past, present or future actions. Again, this does not mean that the Chinese are unable to understand the concept of time. But it does mean they are not obliged to think about timing whenever they describe an action.

When your language routinely obliges you to specify certain types of information, it forces you to be attentive to certain details in the world and to certain aspects of experience that speakers of other languages may not be required to think about all the time. And since such habits of speech are cultivated from the earliest age, it is only natural that they can settle into habits of mind that go beyond language itself, affecting your experiences, perceptions, associations, feelings, memories and orientation in the world.

91. "I have the right to tell you politely that it's none of your business." What is "none of your business" ?
- (A) My spending or not spending an evening with my neighbour
 - (B) Your wondering whether my neighbour is male or female
 - (C) Wondering whether it is my right or not to tell you politely that it's none of our business
 - (D) Your wanting to know whether my neighbour was male or female

92. What determines the gender-marker of the words we use in a language ?

- (A) Linguistics
- (B) Morphology
- (C) Syntax
- (D) Grammar

93. Which of the following statements about Chinese and English is true according to this passage ?

- (A) Chinese is indifferent unlike English to events in time.
- (B) Chinese cannot distinguish between the English tenses.
- (C) Chinese words for action do not reflect the tenses the way those of English do.
- (D) Chinese words cannot understand the sense of time the way English words do.

94. When you refer to the people of China you say _____ and when you refer to the people of England you say _____.

- (A) The Chinese, The English
- (B) Chinese, English
- (C) The Chinese, English
- (D) Chinese, The English

95. "When your language *routinely* obliges you to specify certain types of information". What does the italicized word mean ?

- (A) As done sometimes out of compulsion
- (B) As done always out of compulsion
- (C) As done regularly as procedure
- (D) As done by default, not otherwise

Passage – II

Scientists are primarily moved by curiosity, by the passionate desire to know how things happen in life and nature and secondly, by the desire to use this knowledge for human welfare. Nobody can deny that science has rendered invaluable service to mankind in various spheres. It is due to the discoveries of science that we have been able to find a cure for most diseases and prevent the outbreak of epidemics, thereby vastly increasing life expectancy.

The most valuable service which science has rendered to mankind is that it has given it supreme self confidence. It has given man the assurance that, instead of being a slave to his environment, he can control and modify it to suit his needs. Before the scientific era, an agriculturalist eked out a precarious existence, his livelihood depending upon the vagaries of

the weather. Insect pests, locusts, drought devastated his fields. Now we have built huge dams to supply waters through perennial canals, manufactured fertilizers which enormously increase agricultural production, produced effective pesticides, learnt how to prevent soil erosion, introduced multiple cropping and devised other ways to improve output.

Population control would still be needed if food production is to keep pace with the growth in numbers, but the spectacular progress which scientific cultivation has made possible in the field of agriculture has belied all Malthusian fears. Progress in the industrial field has been even more spectacular, thanks to the application of science to industry. The world, particularly the developed part of it, now enjoys a standard of living which in former ages was not even enjoyed by the wealthier classes. The higher standards of living have made it possible for the governments to provide the social services on a liberal scale.

The machine has not only relieved man of heavy burdensome tasks, but has also provided him with ample leisure in which he can engage himself in cultural pursuits, cultivate various kinds of hobbies and travel. It is through science that he has

been able to invent new sources of entertainment and education, such as cinema, radio and television. The enormous popularity of these sources of entertainment proves how useful they are to mankind. Before the invention of the printing press, education was confined to a small section of the community and was of a predominantly religious character. The printing press revolutionised the art of publication and brought books, periodicals and newspapers within everyone's reach.

96. What made the discoveries of science possible ?
- (A) Inquiry
 - (B) Reasoning
 - (C) Curiosity
 - (D) Skill
97. What significant change in man's life resulted with his knowledge of science ?
- (A) It has made him bold and creative
 - (B) It has made of him a master of his environment
 - (C) It has made him cautious about his environment
 - (D) It has made little difference to his life

98. In which part of the world do people enjoy a higher standard of living ?
- (A) The West
 - (B) The developed
 - (C) The Mid-Eastern
 - (D) The underdeveloped
99. Who would be responsible for extending social services ?
- (A) Governments
 - (B) Local-self governments
 - (C) Scientific institutions
 - (D) Wealthier classes
100. What are enormously popular among the sources of entertainment ?
- (A) Cinema, radio, television
 - (B) Books, periodicals, newspapers
 - (C) Various kinds of hobbies and travel
 - (D) Science, culture, education
